

PREMIUM QUALITY BRAKE PADS

PRODUCT SHEET

08/2022

Provides great stopping power. Available in ceramic, semi and low metallic, with or without anti-vibration shims, chamfers or slotting. Outstanding wear characteristics, high friction level, stable braking across a wide temperature range. Handles high brake temperatures with less heat fade. Provides faster recovery after the stop, generates less dust and wear on pads and rotors. Non-USA origin.

SEMI-METALLIC

These types of Brake Pads are made from about 65% metal, and are made out of steel wool, wire, copper or other metal materials.

- Very durable
- Noise-free

CERAMIC

ABRO's Premium Quality Ceramic Brake Pads are designed for use on light duty U.S. Domestic, European, Japanese/Korean Cars, Trucks and SUV's. Ceramic Brake Pads provide low dust, long wearing and everyday great stopping power.

- 100% rotor-safe
- Low dust and noise
- Instant stopping power

LOW-METALLIC

ABRO's Premium Quality Low-Metallic Brake Pads are designed for medium to light duty Cars, Trucks and SUV's. Our Premium Low-Metallic Brake Pads provide great stopping power. Recommended for vehicles experiencing Brake Pad fade and heat related issues. Economical option for everyday driving.

- Economical
- For everyday driving conditions
- Great stopping power
